Community-Based		✓ (Note 8)	
Arts	✓		
Science			✓
<b>University of Regina</b>			
Social Work	✓ (Note 4)		

**Note:**

1. Students beginning their student studies in UT will have the most options with the following combinations of teaching areas:
  - a. Teaching Area 1 (TA1): Social Studies/Social Science and Teaching Area 2 (TA2): English, Biology, Chemistry, Physics, Math, or Drama
  - b. TA1: English, and TA2: Social Studies/Social ScienceOther options are available, but a full year (5 courses each semester), might not be achieved.
2. An additional three credits of Metabolism Biochemistry is required. Students may take two years of sciences and transfer to a science program at USask to complete the remaining 30 credits of pre-professional requirements for dentistry.
3. Students take 19 University Transfer courses, plus the required SOWK 201 (U of C), or SOWK 240 (MacEwan).
4. UT students may complete some of the required courses and some electives in their first year and then apply to transfer to the university (either the Regina or Saskatoon campus) for their second year. In year two, transfer students would continue in the pre-Social Work program and take INDG 100 and SW 100 (required for admission to the BSW). Students would be eligible to apply for the Bachelor of Social Work degree for their third and fourth years of study. Students are also welcome to apply and register as visiting students with U of R and take INDG 100 and SW 100 online while taking Lakeland classes.
5. Students can take the requirements again in one year, but it will be tough. Students must complete English plus three sciences each semester. Then, in one of those semesters, take statistics. It's recommended that students take the requirements over two years.
6. An additional six credits of Human Physiology are now required. Students may take one year of sciences and transfer to a science program at U of A to complete the remaining 30 credits of pre-professional requirements. Some students have chosen to take the 6-credit course online through U of A. This allows them to stay the full 2 years.
7. An additional three credits of Metabolism Biochemistry are required. Students may take one year of sciences and transfer to a science program at USask to complete the remaining 30 credits of pre-professional requirements for pharmacy.
8. Students can only take up to 57 credits of non-education courses for the community-based education program at U of C. Some supplemental courses through Athabasca University may be required for certain teaching areas. Typically, students will apply after one year with Lakeland. All education courses through the U of C are done online, except for the 2-3 times they are required to be on campus for 2 weeks in July.
